Visual Design

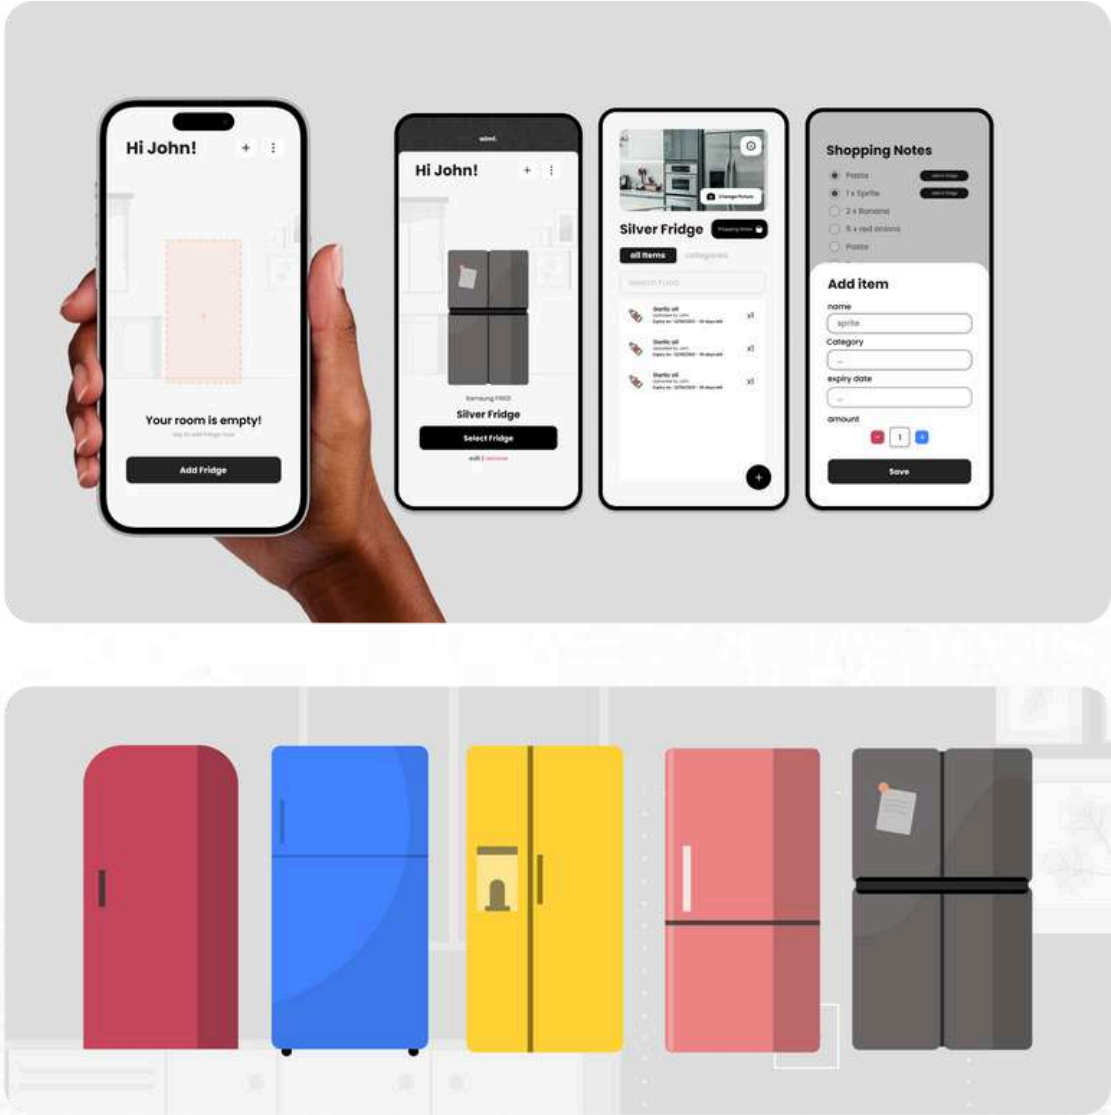

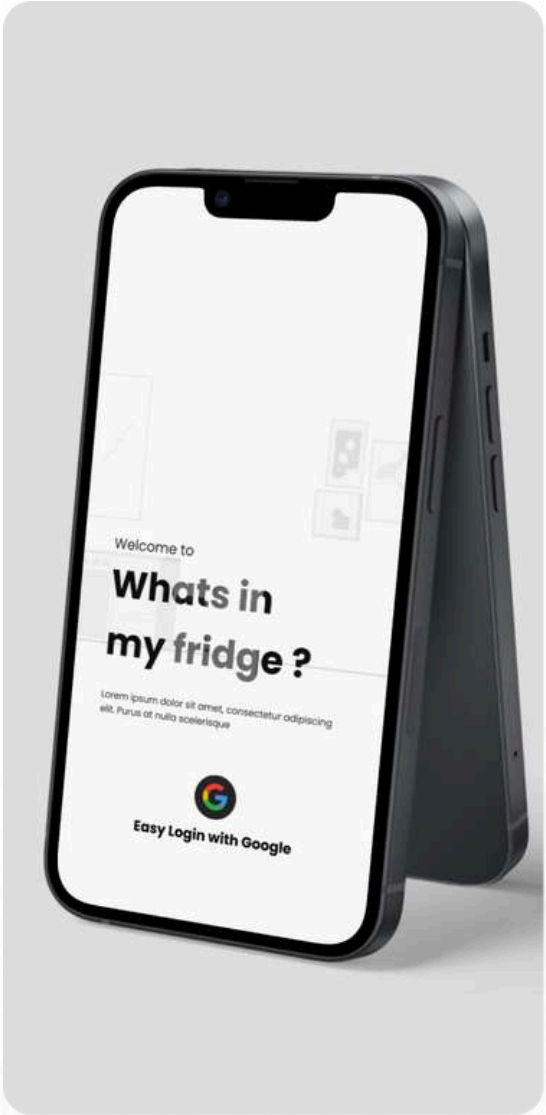

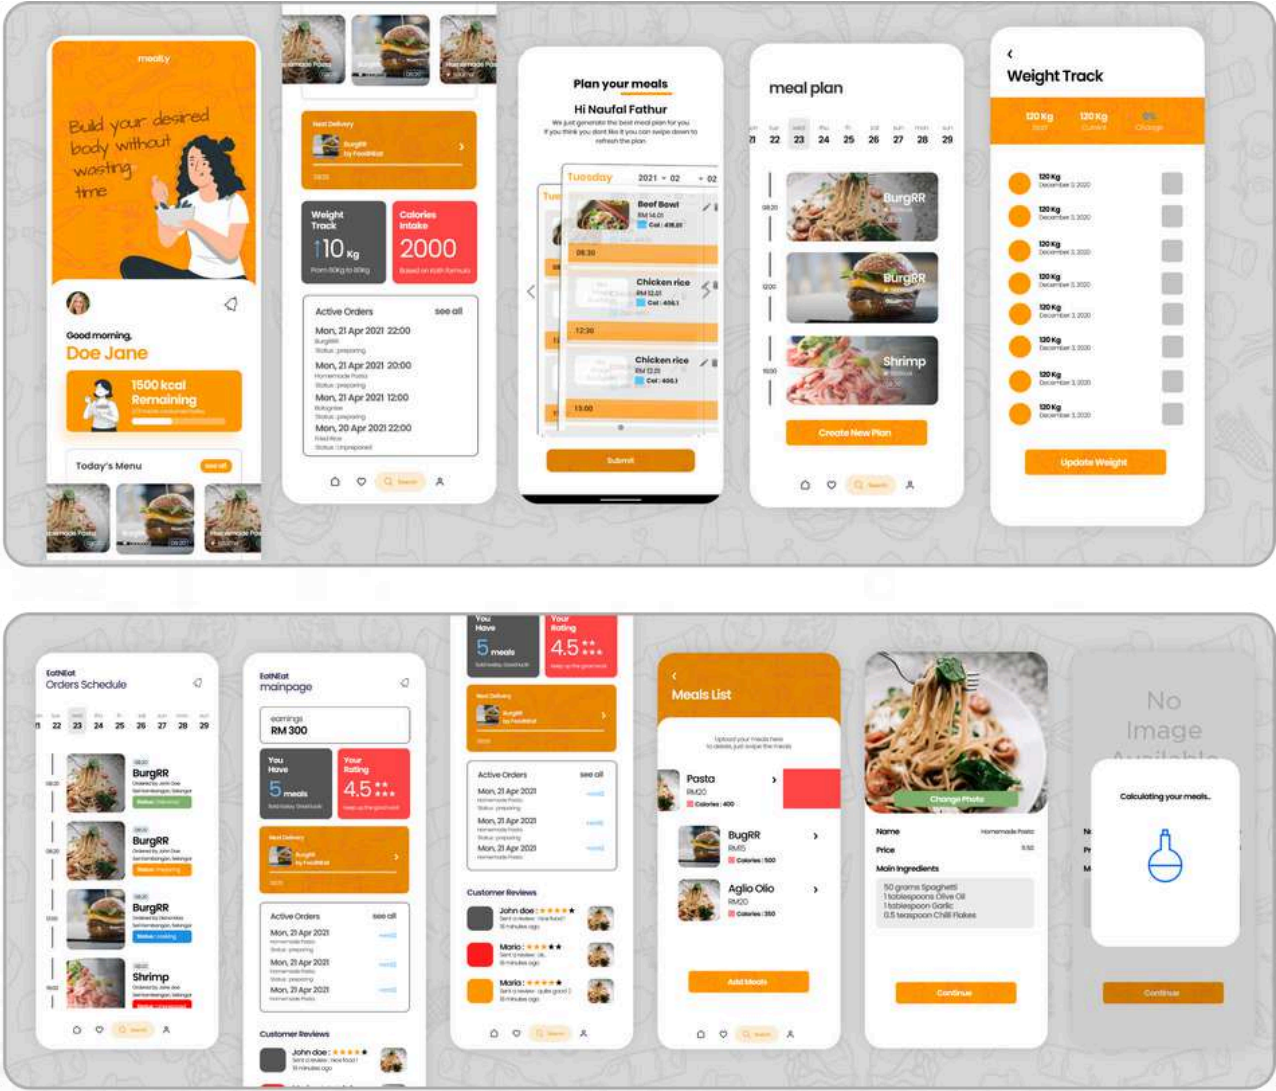

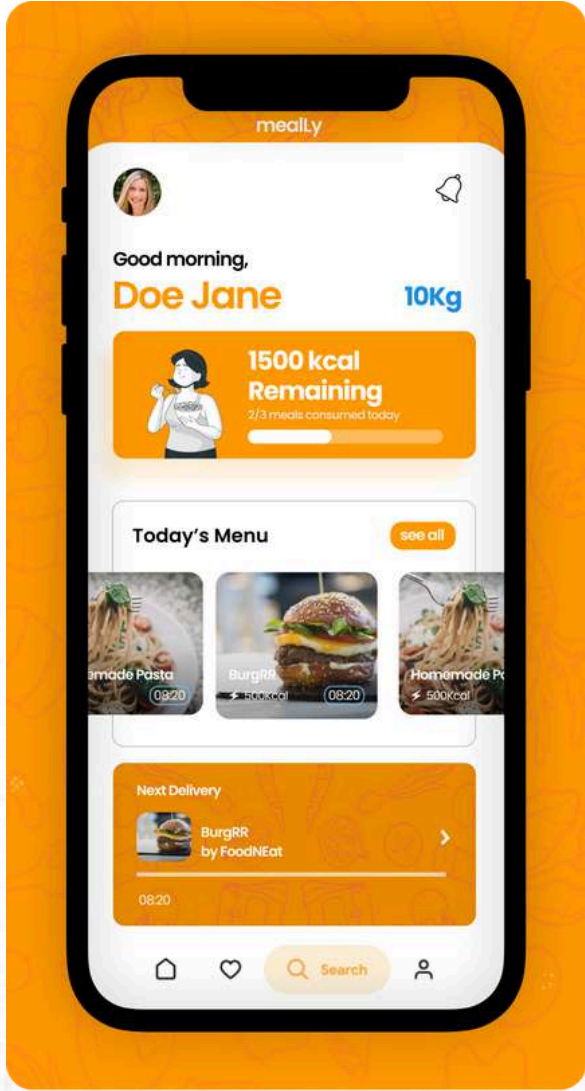

Visual Design

Visual design works ranging from company brochures, business cards, and pitch decks to mockups, ID cards, and branded stationery. I focus on creating cohesive and professional assets that enhance brand identity and communication.

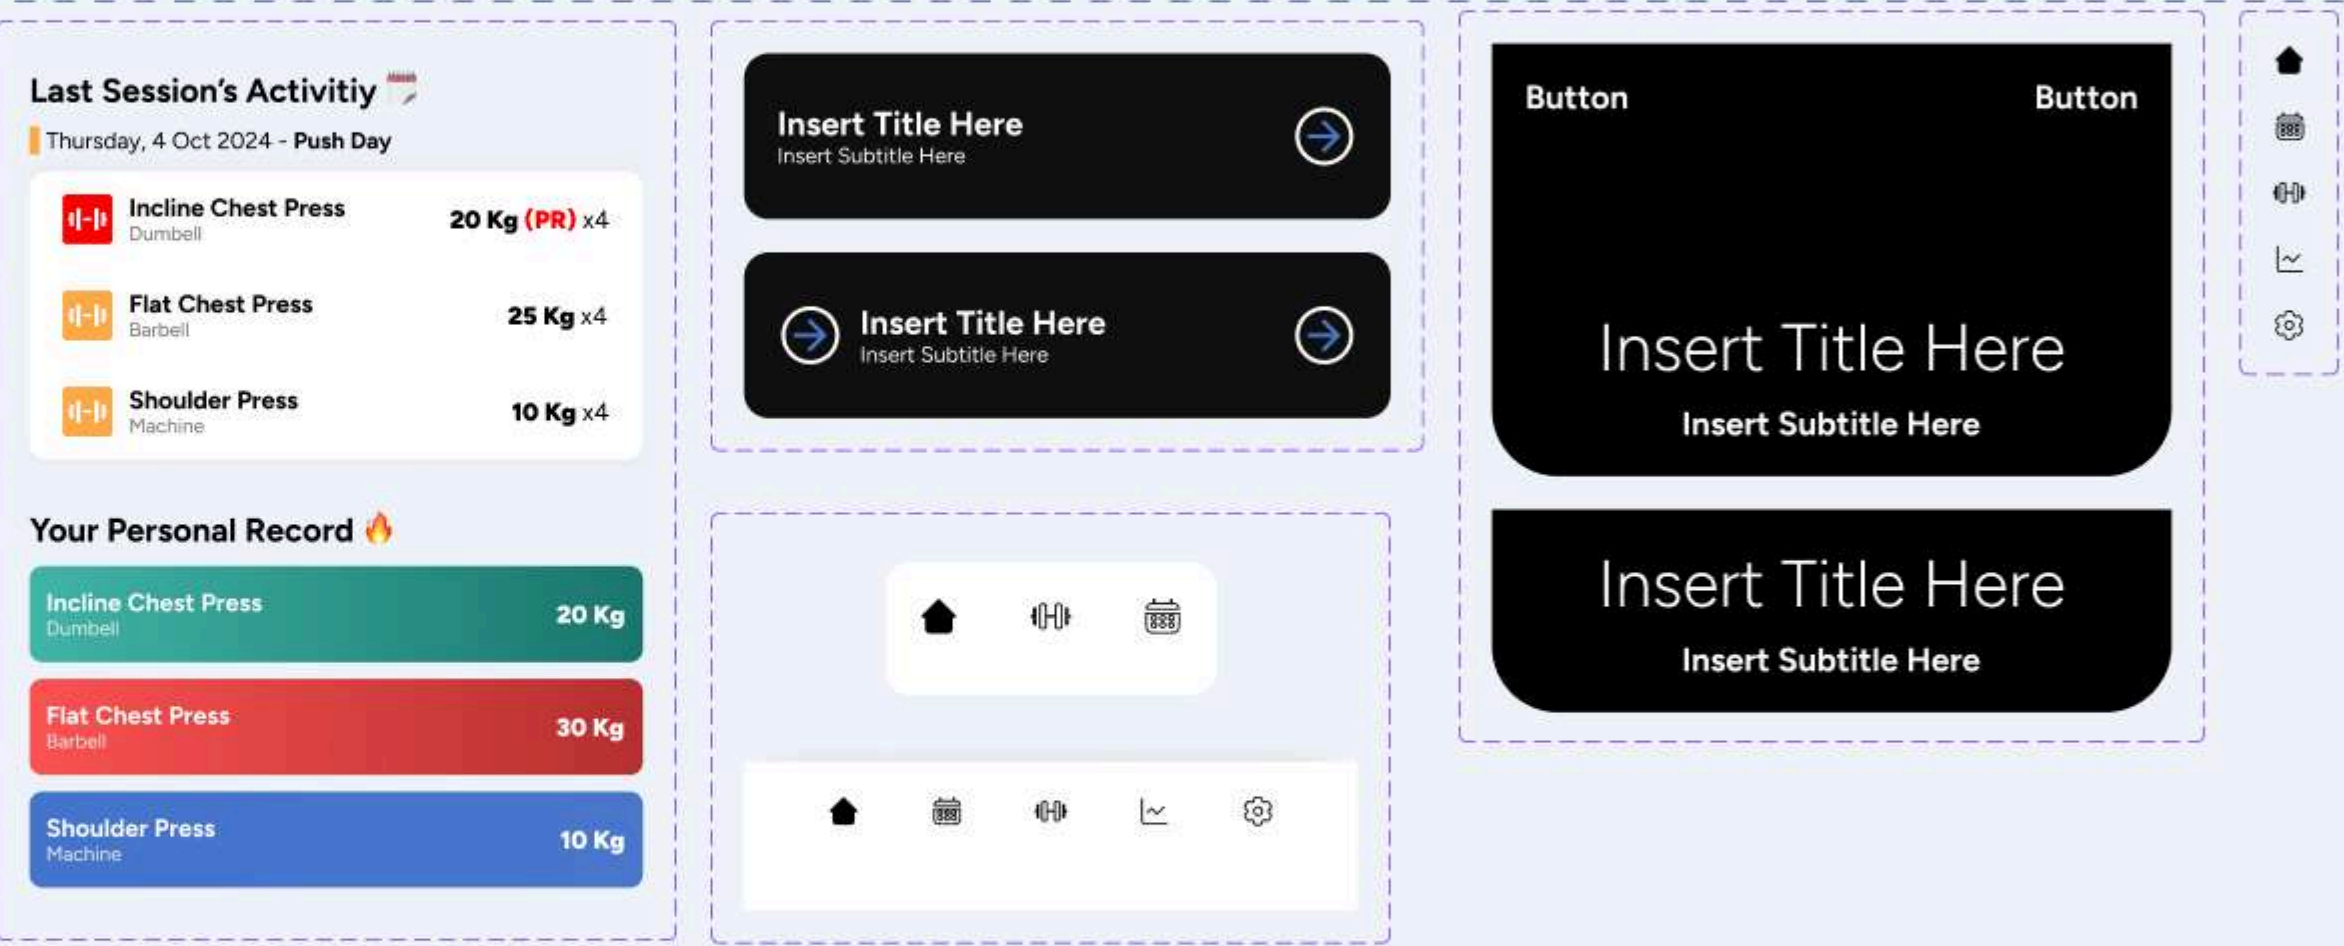

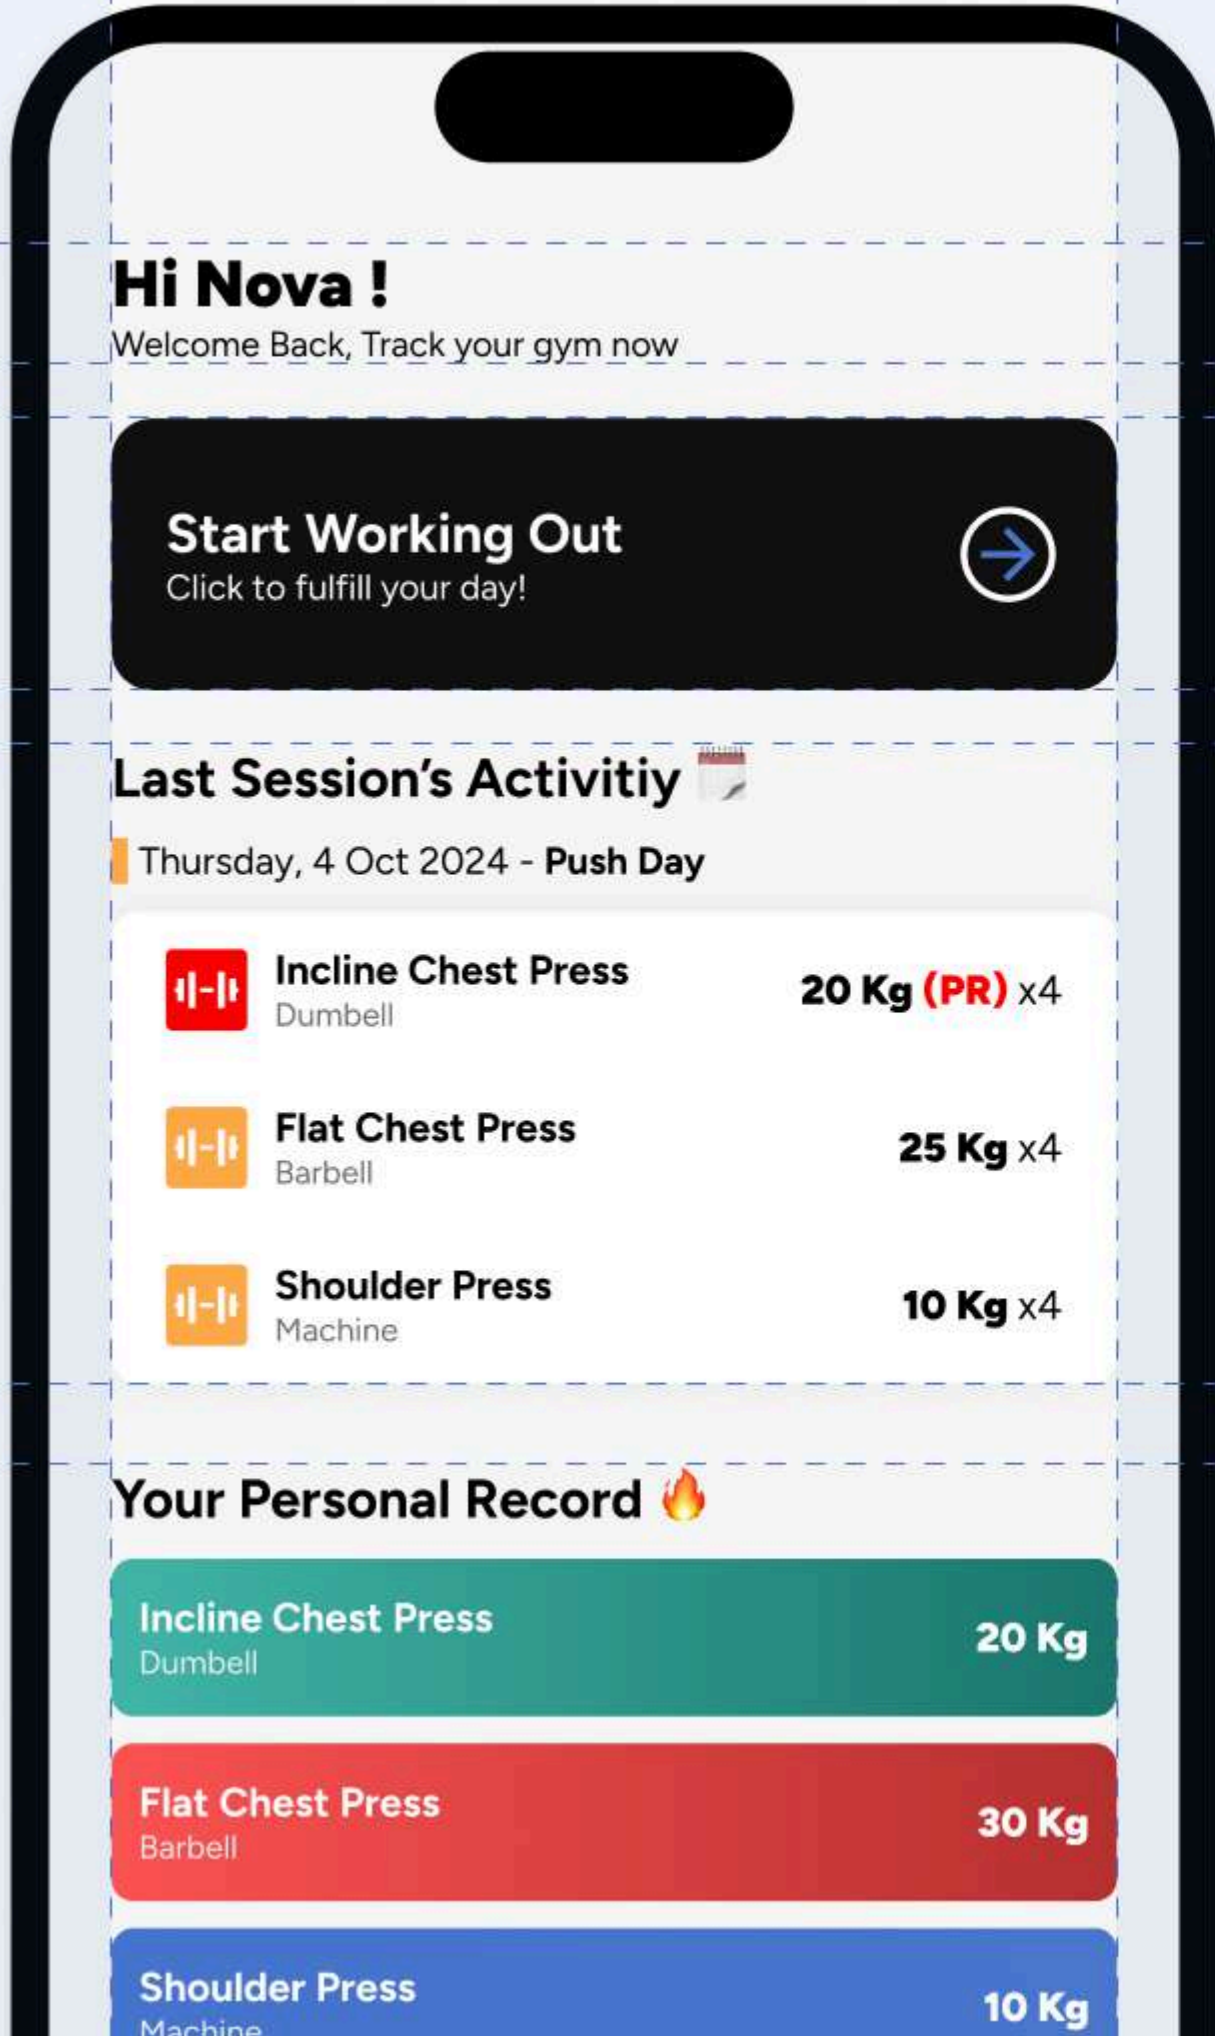

UI/UX Design

UI/UX design projects focused on solving real user problems through intuitive and clean interfaces. From food tracking apps to smart fridge management, each concept is designed with usability, clarity, and user needs at its core.

UI/UX Design

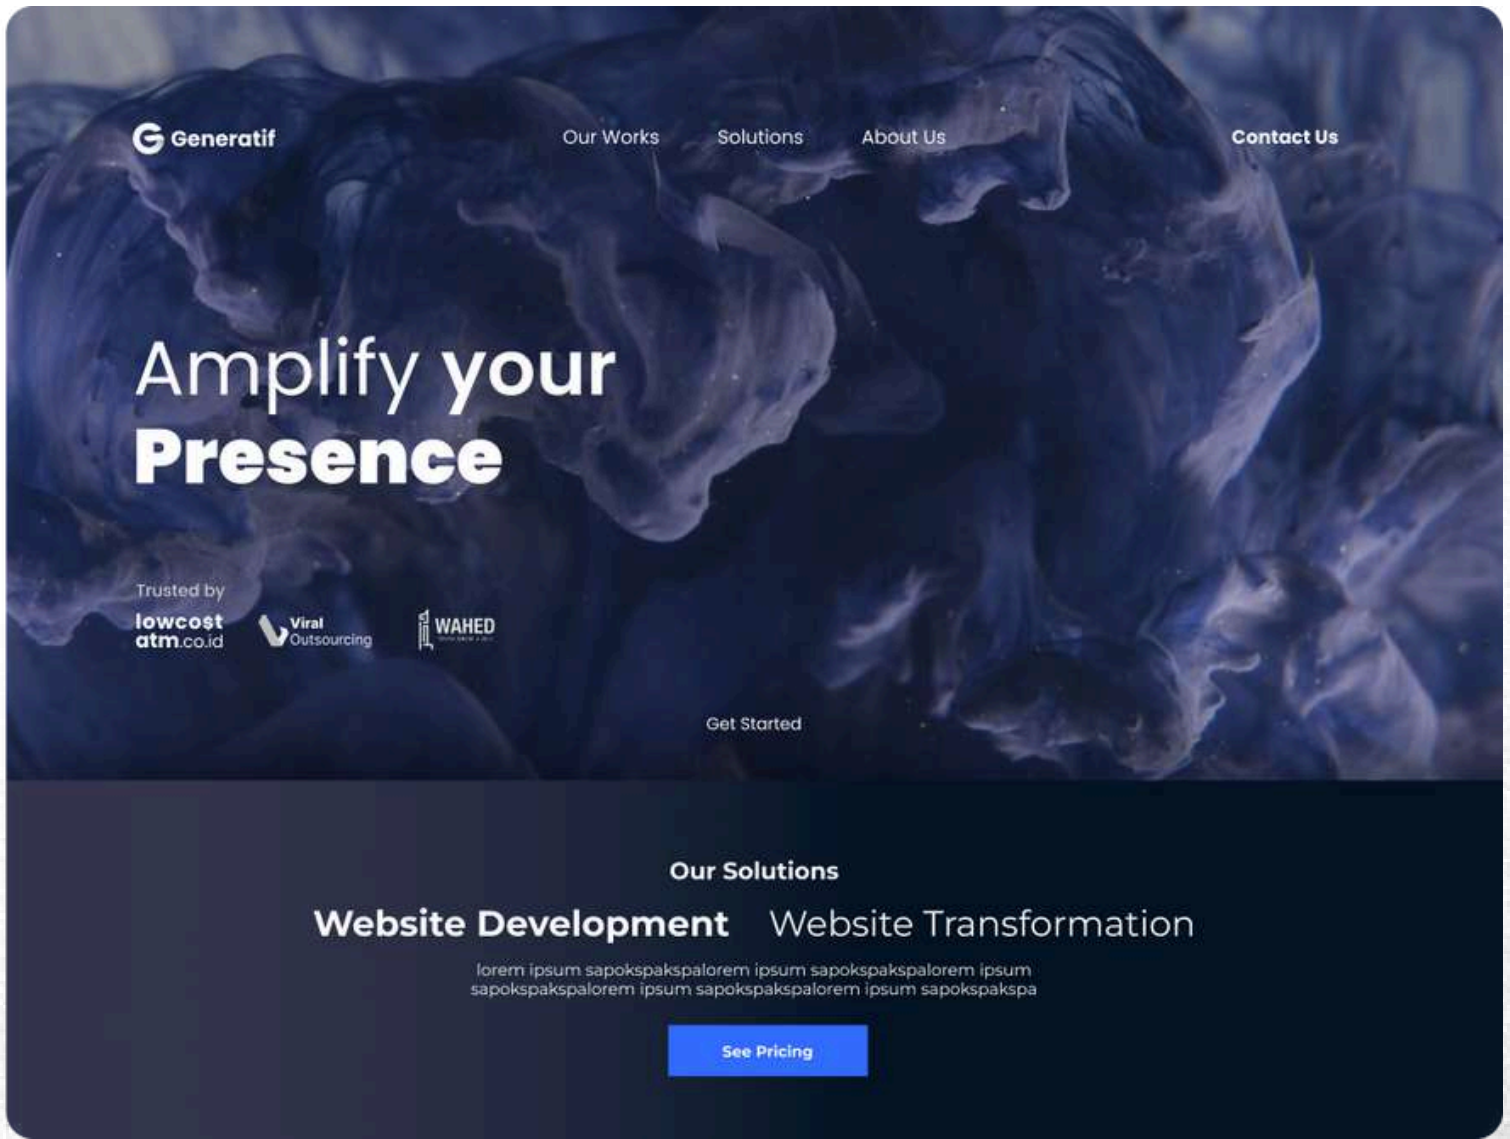

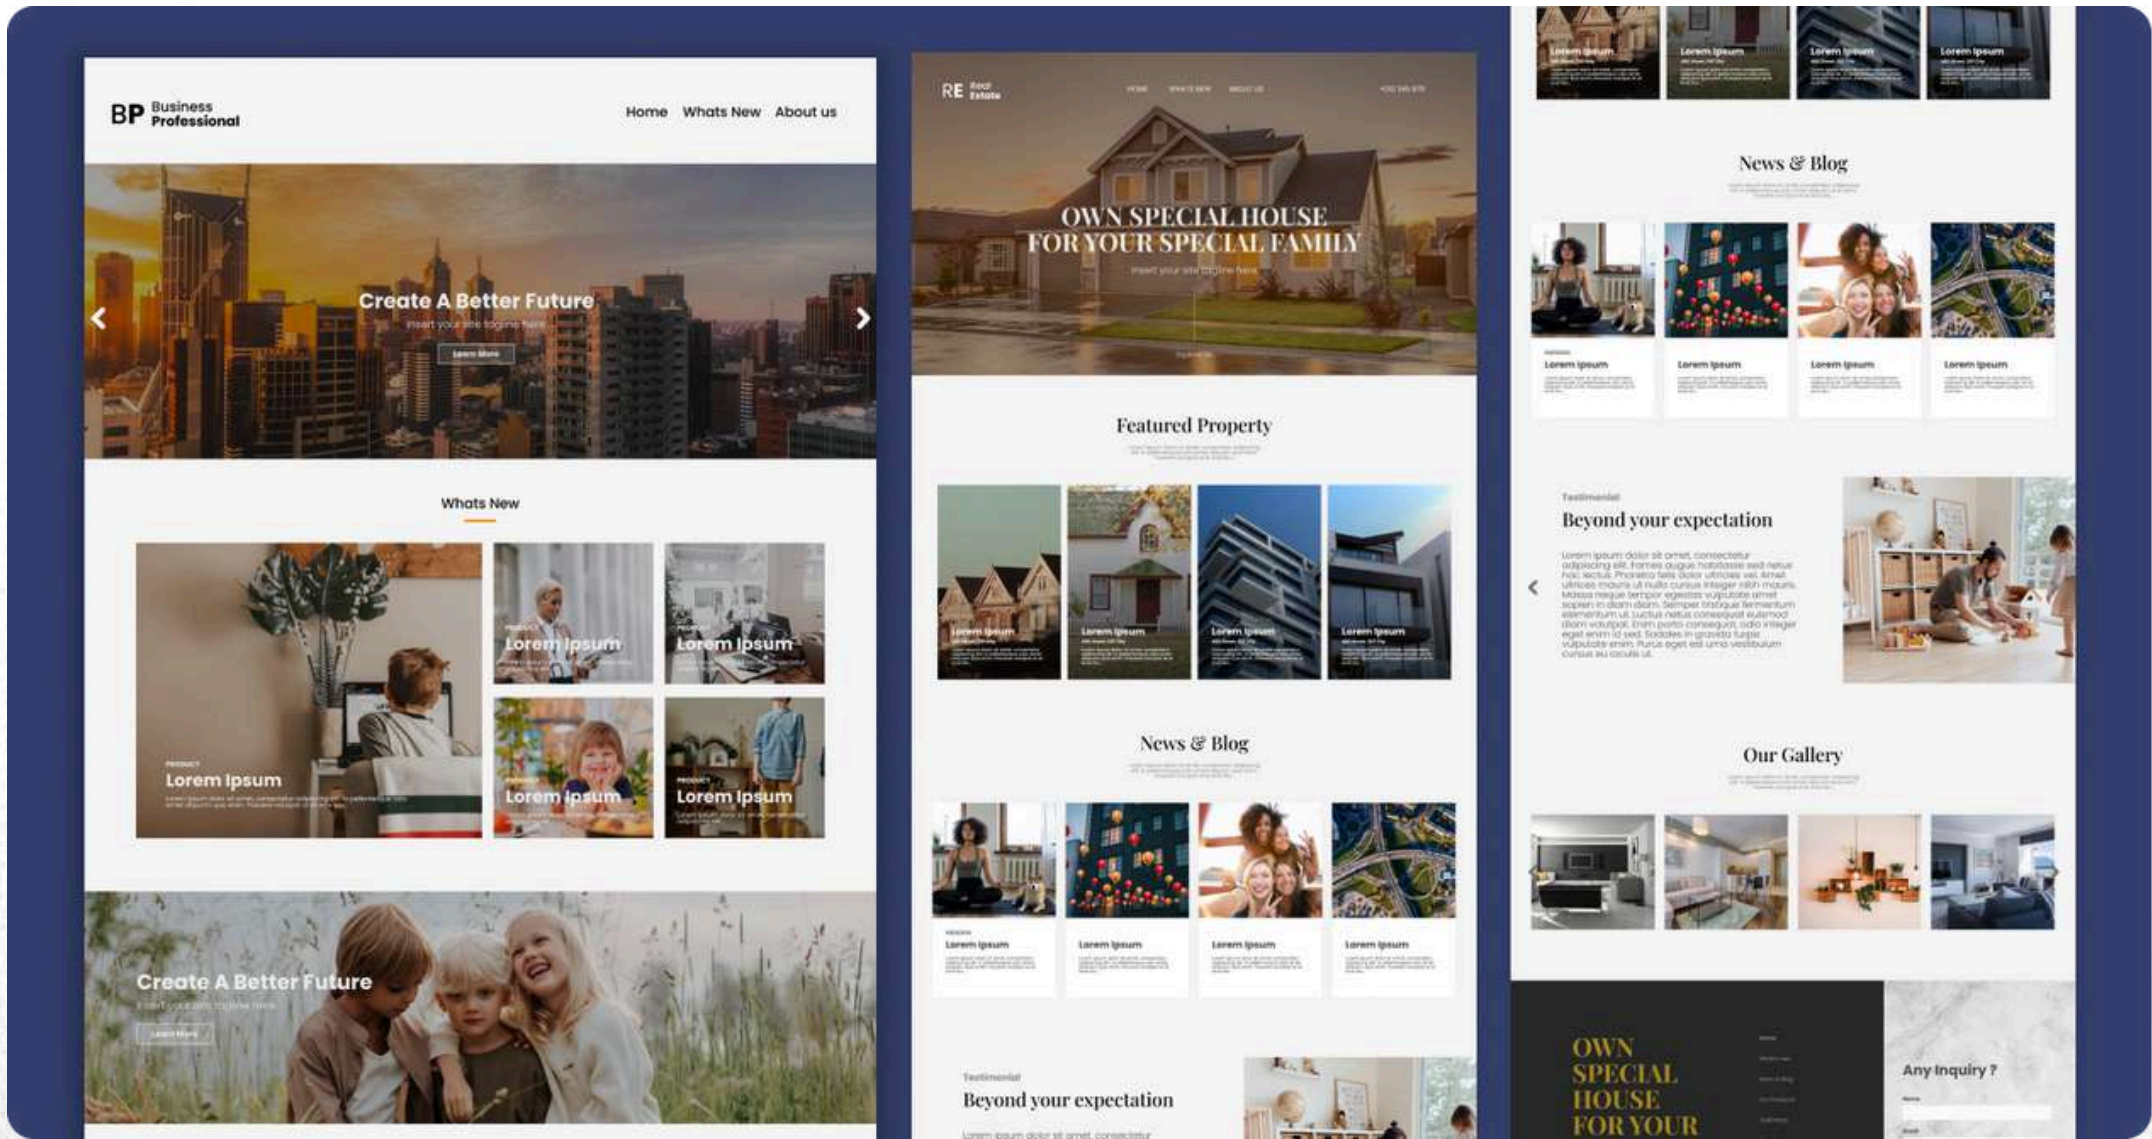

A modular workout tracking interface designed with attention to visual hierarchy, spacing, and accessibility. I prioritise clean layouts, consistent UI patterns, and clear feedback to ensure intuitive navigation and engaging user experience.

Every component is crafted with scalability and usability in mind, following best practices in UI/UX such as clarity, contrast, alignment, and mobile-first responsiveness.

Website design projects for businesses, agencies, and property platforms, focused on clean layouts, intuitive navigation, and visual storytelling. Each design blends aesthetics with functionality to support brand goals and user experience.

Website
Design

Spanning both professional corporate interfaces and modern, casual platforms. I'm not limited to formal aesthetics.

I also enjoy crafting bold, user-friendly layouts for startups and everyday tools, adapting visual tone and structure to suit different audiences and goals.
